

CHAPPIDI RAMA PRAKASH

Full Stack & Android Developer | Backend Engineer | Cloud & Real-Time Systems

+91 9390833979 | chappidiramaprakash167@gmail.com | github.com/ram294167 | portfolio-eight-virid-6hjhyksnoy.vercel.app | Amalapuram, Andhra Pradesh

PROFESSIONAL SUMMARY

Results-driven Full Stack / Backend Developer with hands-on experience designing and deploying scalable, production-grade systems. Proficient in RESTful APIs, real-time platforms, and cloud-hosted services using Node.js, Express.js, PostgreSQL, Redis, Socket.IO, and AWS. Passionate about clean architecture, performance optimization, and delivering reliable systems at scale. Solved 200+ LeetCode problems with strong focus on Graphs and Linked Lists.

TECHNICAL SKILLS

Languages	JavaScript, Java, C
Backend	Node.js, Express.js, REST APIs, MVC Architecture, RBAC, JWT, Middleware Design
Real-Time	Socket.IO, Live GPS Tracking, Bidirectional Communication, Event-Driven Architecture
Databases	PostgreSQL, Redis — Schema Design, Query Optimization, Indexing, Caching, Stored Procedures
Cloud & DevOps	AWS EC2, AWS S3 (presigned URLs), Nginx (reverse proxy, SSL), PM2
Frontend	React, React Native, Vite, Next.js, HTML5, CSS3, html2canvas, jsPDF
Data & Tools	Pandas, Matplotlib, BeautifulSoup, Git, GitHub, Postman, Linux CLI

PROFESSIONAL EXPERIENCE

Freelance Full Stack Developer | Vegaa – Real-Time Booking Platform

Node.js, Express.js, Socket.IO, Redis, PostgreSQL, AWS EC2, Nginx | Feb 2026 – Apr 2026

- Designed and built a real-time on-demand service booking platform (Uber/Rapido-inspired) connecting users with nearby providers with live status updates and GPS tracking.
- Implemented bidirectional event-driven communication using Socket.IO — handling booking requests, provider acceptance/rejection, state transitions, and in-app messaging.
- Built live GPS location tracking with continuous coordinate emission, enabling real-time map updates and ETA estimation.
- Leveraged Redis for session management, socket state persistence, and pub/sub horizontal scaling across multiple server instances.
- Engineered provider matching logic using optimized PostgreSQL spatial queries to rank nearby providers by geolocation, service type, and availability.
- Deployed on AWS EC2 behind an Nginx reverse proxy with WebSocket upgrade support for persistent socket connections.
- Developed an admin panel web application for managing bookings, providers, and platform analytics.
- Built cross-platform mobile applications for Android and iOS using React Native, enabling users and providers to interact with the platform seamlessly on mobile devices.

Freelance Full Stack Developer | CoreFix MEP Services

Node.js, Express.js, PostgreSQL, AWS EC2, AWS S3, JWT, REST APIs | Sep 2025 – Jan 2026

- Architected a multi-module backend system for an MEP service company — handling service booking, AMC subscriptions, user roles, and technician job assignment.
- Designed normalized PostgreSQL schemas supporting complex relationships between customers, service requests, technician profiles, job statuses, and billing records.
- Built secure REST API endpoints with JWT-based authentication and RBAC separating Admin, Technician, and Customer permissions.
- Deployed on AWS EC2: configured Ubuntu server, Nginx reverse proxy, SSL, and PM2 for zero-downtime restarts.
- Integrated AWS S3 for scalable media storage with pre-signed URLs for secure, time-limited upload and retrieval.
- Built an admin panel web application for managing service requests, technician assignments, subscriptions, and billing.
- Developed Android and iOS mobile applications using React Native, allowing customers to book services and track technician status in real time.

Database Intern | Algonox Pvt. Ltd.

PostgreSQL, MSSQL, Database Management & Backend Integration | Oct 2024 – Mar 2025

- Executed full-scale data migration from MSSQL to PostgreSQL, covering schema translation, data type mapping, and post-migration validation — ensuring zero data loss.
- Designed SQL scripts, stored procedures, and triggers to automate repetitive data operations, reducing manual overhead for backend teams.
- Applied 3NF normalization principles and collaborated with backend developers to integrate optimized DB layers with RESTful APIs.
- Conducted performance profiling using EXPLAIN ANALYZE and applied indexing strategies to improve query execution plans.

PROJECTS

Next.js Blog — Full Stack Web App

Next.js 14 (App Router), React, MongoDB, Supabase Storage, JWT, Vercel

2026

- Built a modern full-stack blog with user registration/login, public/private post creation, and media uploads (images, videos, audio) using Next.js 14 App Router.
- Implemented JWT authentication, MongoDB with Mongoose for data storage, and Supabase Storage for media files.
- Designed responsive dark-theme UI with Next.js API Routes for backend; deployed on Vercel with Docker support.

E-Commerce Application — Full Stack Web App

2026

React, Node.js, Express.js, PostgreSQL, Vite, REST APIs

- Built a full-stack e-commerce platform with user authentication (bcrypt), product catalog with filtering, shopping cart, checkout flow, and order history.
- Designed RESTful API endpoints for products, cart, orders, addresses, and payment proof upload using MVC architecture.
- Deployed frontend on Vercel and backend on Render.com with cloud PostgreSQL; supports responsive design across devices.

Invoice Generator — React PDF Builder

2026

React, Vite, CSS, html2canvas, jsPDF, LocalStorage

- Client-side invoice builder with live preview, dynamic line-item calculations (subtotal, GST, discount, grand total), logo/QR/signature uploads, and one-click PDF export.

YouTube Channel Analysis – Web Scraping & Data Viz

2025

Python, BeautifulSoup, Pandas, Matplotlib, Seaborn

- Scraped YouTube metrics (views, likes, engagement), cleaned data with Pandas, and visualized trends via charts and heatmaps to surface actionable content insights.

DSA & COMPETITIVE PROGRAMMING

Solved 200+ LeetCode problems (Easy, Medium & Hard) with strong proficiency in Graphs (BFS, DFS, topological sort, cycle detection), Linked Lists, Trees, Sliding Window, Two Pointers, Backtracking, and Dynamic Programming. Consistent focus on time/space complexity analysis.

EDUCATION

B.Tech – Computer Science & Engineering | RGUKT IIIT Srikakulam

June 2021 – May 2025

CGPA: 8.2 / 10.0 | Coursework: DSA, DBMS, OS, Computer Networks, Software Engineering, OOP

Pre-University Course (PUC) | Board of Intermediate Education, AP

Aug 2019 – Apr 2021

CGPA: 8.9 / 10.0

CERTIFICATIONS

- SQL Certification — Great Learning | 2024
- MongoDB Certification — MongoDB University (Official) | 2023
